**Subject:** MAC Updates 2/23/23

Hey Paul –

Please see below for the Carus MAC updates for 2/23/23. Let me know if there are any questions.

Carus MAC Updates 2/23/23

- Great progress has been made on cleanup, demolition, and disposal over the last week.
- Air Monitoring continues along our fence line and direct on response workers; results are consistently within acceptable limits. Data has been shared with IDPH.
- Fire contaminated debris has been properly profiled and is leaving the site. To date 18 fire impacted debris boxes, 14 metal scrap loads, and 1 sludge box have left the site for disposal. We have a number of shipments scheduled in the coming days.
- All contact water/liquid remains contained in our Emergency Containment Pond. We have worked with the City of LaSalle, IEPA, and USEPA to develop a plan for onsite treatment. An onsite wastewater treatment plant has been installed and is treating the liquid. We have submitted samples to a 3<sup>rd</sup> party lab and are awaiting verification results of the treatment. We expect to begin discharging to the City POTW on Monday.
- Davies Group continues to handle claims for affected residents. Information is available on our Carus website.
- We continue to have regular update calls with USEPA and IEPA.

If there are any questions for Carus this week, please contact Joe McNamara (815-228-2522) or Cory Peruba (815-343-0888).

**Joe McNamara**
